

TRAVELynx

Travel App Team Members: Phillip, Claudia, Brad, Michelle, and Deri

Description:

We are creating an app for people to plan trips together by having an app to set up an itinerary and share it with friends or family. Our idea came from the stress of taking group trips trying to text everyone and get them on board with plans which is a hassle. This is where TRAVELynx comes into play letting a user or users compile lists of activities to do, set dates for travel, and have a comment thread to discuss the upcoming trip. We believe this makes it easier to plan a trip, and if a person does not want to download the app or participate, we have a private link to send users so they can view the page and get their trip details.

Individual Responsibilities:

Brad: Front-end Google maps component
Claudia: Front-end Conversion Component
Michelle: Back-end
PM Deri: Full-stack and user log-in/authentication
Phillip: Google Places Component

Challenges:

Finding usable APIs, implementing Google Places API

Improvements:

For future improvements we would like to have users book trips through the app itself.
